

ACCESSIBILITY CONFORMANCE

accessibilityconformance.com

WCAG 2.2 Level AA Automated Accessibility Review

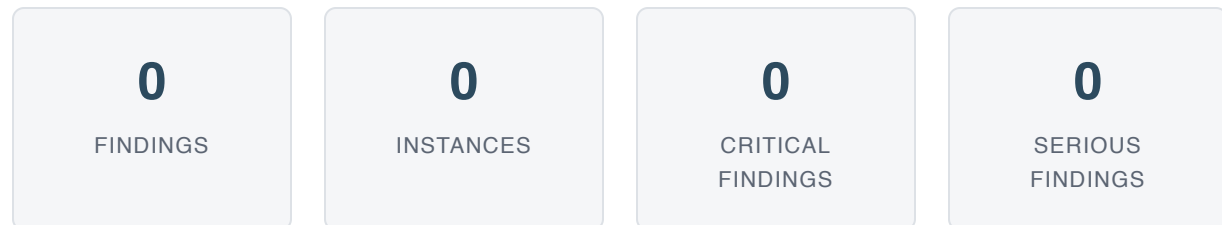

Site audited: <https://accessibilityconformance.com>

Report date: October 8, 2026

Pages scanned: 33 (4 more found but not scanned, see Scope and limitations)

Applicable rule: ADA Title III (No federal funding)

Executive Summary

Automated testing found no issues on the pages scanned. Automated testing covers only part of WCAG, so manual testing is still required to confirm conformance.

Litigation Risk

This site was assessed against WCAG 2.2 Level AA under **ADA Title III**, which applies to private businesses serving the public. Title III carries no fixed compliance deadline, but it is the most heavily litigated accessibility statute in the country, plaintiffs' firms actively scan public-facing sites for exactly the kinds of automated findings in this report. Unremediated findings represent ongoing legal exposure, not a future deadline.

Root Causes

No findings collapsed into a shared root cause in this run.

Findings by Severity

No automated conformance findings were detected.

Recommendations

The items below are automated best-practice suggestions, not WCAG 2.2 AA conformance failures. They do not affect this site's compliance status but represent opportunities to improve the experience further. Items affecting many pages under one rule are grouped below as a single fix rather than listed once per page.

No additional best-practice recommendations were identified.

Manual Testing Checklist

Automated tools such as axe-core and Lighthouse detect roughly a third of WCAG success criteria failures. The items below require a human tester and were not evaluated in this automated pass; example pages are pre-populated where relevant page features were detected.

Keyboard: Keyboard Navigation

Verify every interactive element (links, buttons, form controls, menus) can be reached and operated using only the keyboard, in a logical order.

Example pages: <https://accessibilityconformance.com/guides>, <https://accessibilityconformance.com/pricing>,
<https://accessibilityconformance.com/guides/ada-title-ii-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/section-504-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/ada-website-compliance-for-private-businesses>

Keyboard: Keyboard Traps

Confirm keyboard focus is never trapped inside a widget (modal, menu, embedded content) such that Tab/Shift+Tab cannot move focus back out.

Example pages: <https://accessibilityconformance.com/guides>, <https://accessibilityconformance.com/pricing>,
<https://accessibilityconformance.com/guides/ada-title-ii-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/section-504-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/ada-website-compliance-for-private-businesses>

Keyboard: Visible Focus Indicators

Confirm a visible focus indicator is present and sufficiently distinct on every focusable element when navigating by keyboard.

Example pages: <https://accessibilityconformance.com/guides>, <https://accessibilityconformance.com/pricing>,
<https://accessibilityconformance.com/guides/ada-title-ii-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/section-504-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/ada-website-compliance-for-private-businesses>

Images: Alt Text Meaningfulness

Review alt text on meaningful images for accuracy and usefulness (not just presence). Automated tools can confirm an alt attribute exists but not that it correctly conveys the image's purpose.

Example pages: <https://accessibilityconformance.com/guides>, <https://accessibilityconformance.com/pricing>,
<https://accessibilityconformance.com/guides/ada-title-ii-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/section-504-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/ada-website-compliance-for-private-businesses>

Forms: Form Error Identification

Submit forms with invalid/missing data and confirm errors are identified in text (not color alone), programmatically associated with the relevant field, and announced to assistive technology.

Example pages: <https://accessibilityconformance.com>, <https://accessibilityconformance.com/signup>,
<https://accessibilityconformance.com/contact>, <https://accessibilityconformance.com/contact?plan=custom>

Media: Video Captions

Confirm all prerecorded video content has accurate synchronized captions.

Example pages: <https://accessibilityconformance.com>

Media: Audio Descriptions

Confirm video with meaningful visual-only content has audio description, and standalone audio content has a text transcript.

No applicable pages identified in this crawl.

Screen Reader: Screen Reader Reading Order

Navigate key pages with a screen reader (NVDA/JAWS/VoiceOver) and confirm content is announced in a logical order matching the visual layout and intent.

Example pages: <https://accessibilityconformance.com/guides>, <https://accessibilityconformance.com/pricing>,
<https://accessibilityconformance.com/guides/ada-title-ii-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/section-504-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/ada-website-compliance-for-private-businesses>

Visual: Reflow Zoom 200

Zoom the page to 200% (and reflow to a 320px-equivalent width) and confirm no content or functionality is lost, and no two-dimensional scrolling is required for vertical text.

Example pages: <https://accessibilityconformance.com/guides>, <https://accessibilityconformance.com/pricing>,
<https://accessibilityconformance.com/guides/ada-title-ii-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/section-504-web-accessibility-rule>,
<https://accessibilityconformance.com/guides/ada-website-compliance-for-private-businesses>

Structure: Heading Hierarchy Logic

Review heading levels on key pages for logical, meaningful hierarchy (not just non-skipping order, which automated tools already check). Headings should accurately outline the page's content.

Example pages: <https://accessibilityconformance.com/guides>, <https://accessibilityconformance.com/pricing>, <https://accessibilityconformance.com/guides/ada-title-ii-web-accessibility-rule>, <https://accessibilityconformance.com/guides/section-504-web-accessibility-rule>, <https://accessibilityconformance.com/guides/ada-website-compliance-for-private-businesses>

Document Inventory Summary

o linked document(s) (PDF/DOC/XLS/PPT) were found during the crawl. A sample of o was fetched and inspected for accessibility structure. Of the sampled documents, o showed evidence of tagged structure and o did not.

No linked documents were found.

Methodology and Limitations

This report was generated using automated tooling: axe-core (WCAG 2.1/2.2 A/AA rule tags) for conformance findings, a separate axe-core best-practice pass for the Recommendations section above, and Google Lighthouse for a supplementary, sampled accessibility score. No content management system was detected. The site is built on Astro (medium confidence), so remediation is likely application-level work rather than theme-level work.

Assessed against WCAG 2.2 Level AA. The applicable federal regulations (ADA Title II, Section 504) currently specify WCAG 2.1 Level AA; WCAG 2.2 is a superset that includes all 2.1 criteria plus additional success criteria, so this assessment fully covers the regulatory standard and more.

Lighthouse accessibility score: **100%**, sampled across 5 representative page(s) of 33 scanned (homepage plus one page per distinct URL template). Lighthouse's accessibility category is itself powered by axe-core and weights a limited rule subset, so it is a rough indicator and not a conformance measure, and should not be read against the findings above as if it summarized them.

Automated testing tools reliably detect only a portion of WCAG 2.2 success criteria. Industry estimates generally place automated coverage between 30 and 40% of all testable criteria. Issues involving meaning, context, and human judgment (for example, whether alt text is accurate, whether reading order makes sense, or whether a keyboard trap exists) require manual testing by a human evaluator.

Manual testing was not performed as part of this report. The Manual Testing Checklist above identifies the specific areas that require human review to reach a complete WCAG 2.2 AA conformance assessment. This report should be treated as an automated baseline, not a full conformance certification.

Pages not scanned: 4 pages were found by the crawler but could not be scanned, so they are not covered by this report: <https://accessibilityconformance.com/login> (blocked by the site's robots.txt); <https://accessibilityconformance.com/dashboard> (blocked by the site's robots.txt); <https://accessibilityconformance.com/forgot-password> (blocked by the site's robots.txt); <https://accessibilityconformance.com/dashboard/account> (blocked by the site's robots.txt).

No broken links were found during the crawl.
